

## LEARN MORE

Many Years ago, even before the term were widely accepted. Our company had realized there is an opportunity to do business, and support the Embracing of Sustainability and the Green initiative.

The Semiconductor industrial sector, which includes the manufacturing industry, is among the contributors of greenhouse gas emissions, landfills and pollution around the world.

Semiconductor Wafer Fabrication, Semiconductor IC's were dumping equipment and parts worth hundreds of thousands to million when new, to scrapyards for disposal. Some were eventually liquidated to extract the raw materials.

With hiring the suitable resources, we embarked on the acquiring of still functional Equipment, no longer required. They need some re-configuration, re-conditioning and becomes useful again for other factories to use. Surplus New unnecessary parts or seldom used parts was also put back to use in factories that could use them.

When we started there was only a few businesses were doing this, in the Semiconductor Industry. Today this Earth sustaining effort, has caught on, and there are more traders doing likewise.

YOU HELP US TO HELP SAVE THE EARTH. Send us your surplus list for disposal.
